## **DETAILED ACTION**

### ***Response to Arguments***

1. Examiner took notice of the remarks made by applicant filed on 1/20/04.
2. Claims 1-68 are pending.

### ***Allowable Subject Matter***

3. Claims 1-68 are allowed.
4. Claims 1-68 are considered allowable since prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations having in a second mode of operation, a first plurality of X-lines associated with the first selected Y-line to impress a read bias across each of a corresponding first plurality of selected memory cells respectively coupled between the first plurality of selected X-lines and the first selected Y-line, enabling a first read circuit having an input coupled to the first selected Y-line; and generating a first read signal on an output of the first read circuit having a first value if an aggregate read current through the one or more selected memory cells exceeds a respective threshold level. The prior art does not disclose generating one or more output signals numbering less than the number of simultaneously selected memory cells, each respective output signal for indicating whether a read current greater than the particular value flows through one or more selected memory cells of each group of memory cells respectively associated therewith. Prior art also does not disclose an integrated circuit wherein during a test mode, the X-line decoder is configured to select more than one of the first plurality of X-lines when the first Y-line sense circuit is enable and the device have method for testing a memory array comprising the steps of identifying a maximum acceptable value of read current that would result from applying a given

voltage across a defined group of unprogrammed memory cells and applying the given voltage across a first group of memory cells to be tested.
